## Y5: Measure and geometry

### Measure

10mm = 1cm  
100cm = 1m  
1,000m = 1km

1,000g = 1kg  
1,000ml = 1L

**METRIC**

8 km = 5 miles (1 km = 5/8 mile)

1 inch = 2.5cm  
1 ounce = 28g  
1 pound = 0.45kg

**IMPERIAL**

30 days have September, April, June and November.  
All the rest have 31, except February, which has 28 days clear, and 29 every leap year!

1 minute = 60 seconds  
1 hour = 60 minutes  
1 day = 24 hours

Add 12

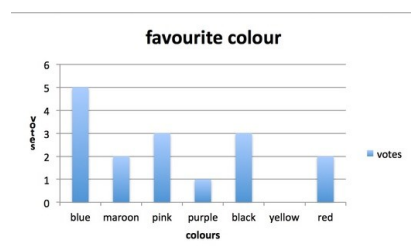

12 hour clock (pm) → 24 hour clock

1 year = 365 days = 52 weeks = 12 months

### Statistics

Line graph shows a trend.  
E.g. temperature over time.

Bar graph shows categories of data.  
E.g. favourite colour

### Perimeter/Area/Volume

Rectilinear shape

**Perimeter** = length around outside

E.g.  $2a + 2b$  (cm/m).

**Area** = 2D space taken up

E.g.  $a \times b$  (cm/m<sup>2</sup>).

Total area = area rectangle 1 + area rectangle 2

Composite rectilinear shape

**Volume** = 3D space taken up

E.g.  $a \times b \times c$  (cm/m<sup>3</sup>)

### Angles

Acute angle  $< 90^\circ$

Obtuse angle  $> 90^\circ$

Reflex angle  $> 180^\circ$

Right angle =  $90^\circ$

Straight line =  $180^\circ$

Full circle =  $360^\circ$

Angles in a rectangle total  $360^\circ$

Angles in a triangle total  $180^\circ$

### 2D/3D shapes

**3D**— edges, faces, vertices.

**2D**— sides, angles.

### Triangles

**equilateral**  
all sides equal  
all angles equal

**isosceles**  
two sides equal  
angles opposite sides equal

**scalene**  
no sides equal  
no angles equal

### Rectangles

Four  $90^\circ$  angles

Opposite sides equal and parallel

Two lines of symmetry

Square = a regular rectangle

**Regular** = All sides/angles equal

**Irregular** = All sides/angles not equal

### Position and direction
